PROFILE

Front-end developer focused on building responsive, accessible interfaces with React and modern CSS. Experienced designing complete UI/UX flows in Figma and shipping them as production-ready components, with hands-on experience building REST API integrations and Python-based NLP data pipelines.

TECHNICAL SKILLS

- **Core:** HTML5, CSS3, JavaScript (ES6+), Python
- **Frameworks & APIs:** React, Bootstrap, RESTful APIs, spaCy / NLP basics
- **Design & Architecture:** Responsive Design, Component-Driven Development, Figma, Accessibility (WCAG)

PROJECTS

Food Delivery App — UI/UX Case Study *Figma · Design Systems · UI/UX*

- Designed a complete mobile-first UI/UX case study — Home, Item Detail, Cart, and Checkout — delivering a five-screen flow ready for developer handoff at a 375px viewport.
- Built a reusable Figma design system with Variants and Auto Layout, so a single master-component edit propagates across every instance, cutting design-update time.
- Applied accessibility standards throughout, meeting WCAG contrast guidance with 14px+ body text and 44×44px minimum tap targets.

AI-Powered Resume Parser *Python · spaCy/NLP · REST APIs · React*

- Built an NLP pipeline in Python that ingests PDF and DOCX resumes and extracts clean, structured text from unstructured layouts.
- Used custom layout segmentation and Named Entity Recognition (NER) to extract candidate details, skills, and work history, correctly identifying key fields across **90%** of test resumes.
- Serialized extracted data into a structured JSON schema, served via REST API to a React front end for real-time review and editing of parsed fields.

Personal Portfolio Website *React · TypeScript · TanStack Router · Tailwind CSS*

- Architected a responsive personal portfolio with React, TypeScript, and TanStack Router to showcase projects, skills, and background.
- Built a modular component architecture with dynamic routing, reducing duplicated UI code across pages.
- Optimized performance and cross-browser accessibility with mobile-first CSS, keeping the experience fast on both desktop and mobile.

CERTIFICATIONS

- **Frontend Developer Path** — advanced HTML/CSS, JavaScript, React, accessibility, state management, hooks, API integration.
- **Learn React** — component architecture, state management, hooks, API integration.
- **Intro to AI Engineering** — building LLM-powered web apps and integrating AI APIs into web interfaces.

EDUCATION

Bachelor of Technology — Full Stack Development
